

MILKPAL

VS MAIN COMPETITOR

Simply smooth.

The easiest, most consistent steamless milk system.

HOT MILK \ COLD MILK \ HOT FOAM \ COLD FOAM

HOW DOES MILKPAL COMPARE AGAINST THE LEADING COMPETITOR?

1. Cleaning

- Unlike leading competitor, MilkPal is connected to mains and waste water.
- MilkPal triggers an internal flush after every pour, meaning milk doesn't sit in the lines.
- If MilkPal is inactive for 6 minutes, it will auto-flush for 20s and push milk back into the vessel.
- Cleaning and maintenance is much more consistent.
- Plumbed system also means end-of-day cleaning can be automated for an easier, quicker, more reliable cleaning cycle.
- User can choose any standard alkaline milk cleaner (e.g. Urnex Rinza).

Internal flush after every pour for easier cleaning & maintenance

2. Flexibility

Users can choose either dairy or alt milk.

Users can set volume and air ratio per recipe.

3. Ease of Use

With pre-set recipes MilkPal is so easy-to-use and requires minimal training.

4. Consistency

With pre-set recipes every beverage served is consistent, regardless of who is serving.

5. Cost of Ownership

MilkPal has no daily consumables and can be used with any standard alkaline milk cleaner (e.g. Urnex Rinza).

6. Design

MilkPal has a low-profile and sleek design which looks amazing on any bar.

7. Service

MilkPal is easy to service and install.
